PROFILE

I'm Mohammed Hossam, a Front-End Developer with a strong focus on building user-centered, high-performance web applications. Over the past few years, I've contributed to a variety of projects — from responsive dashboards to e-commerce platforms — collaborating closely with designers, back-end developers, and product teams to turn ideas into seamless digital experiences.

My work goes beyond translating designs into code. I actively contribute to enhancing usability, optimizing performance, and ensuring accessibility. I enjoy solving real-world problems with clean, maintainable code and am always striving to grow — both technically and creatively.

My goal is to be more than just a developer. I aim to be a team player who bridges the gap between design and functionality, helping create products that are not only efficient but also delightful to use.

PROFESSIONAL EXPERIENCE

Frontend developer, Serv5	2024.07 – 2025.05 Mansoura
<ul style="list-style-type: none">Contributed to the development of production-level web applications for real clients, including e-commerce platforms and online services.Translated complex Figma designs into responsive and accessible components using Next.js, React, Tailwind CSS, and TypeScript.Integrated RESTful APIs and managed state using React hooks and Redux to deliver dynamic and interactive user experiences.Participated in planning and team standups, collaborating with back-end developers and project managers to ensure timely delivery and feature alignment.Took part in improving UI/UX flow and suggesting performance enhancements across multiple projects.Delivered scalable and maintainable code while adhering to deadlines in a fast-paced	
Freelance Frontend Developer	2025.05 – present
<ul style="list-style-type: none">Working with clients remotely to build responsive and performant web applications using React, Next.js, Tailwind CSS, and TypeScript.Transforming complex UI/UX designs from tools like Figma into dynamic, reusable components.Collaborating with cross-functional teams including designers and backend developers to deliver full-featured apps.Optimizing apps for speed, accessibility, and maintainability.Handling client communication, project scoping, and timelines independently.	

PROJECTS
